

Lightweight Design Inc. provides structural design and engineering services for the fabric structures and tent rental industry.

For the tent rental industry:

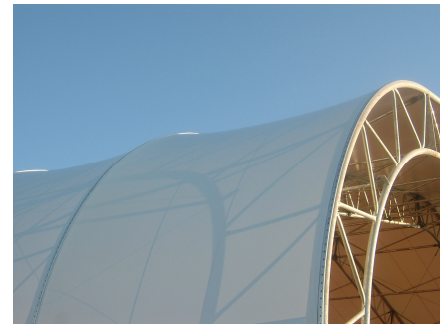

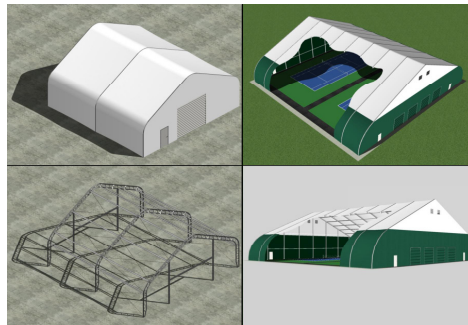

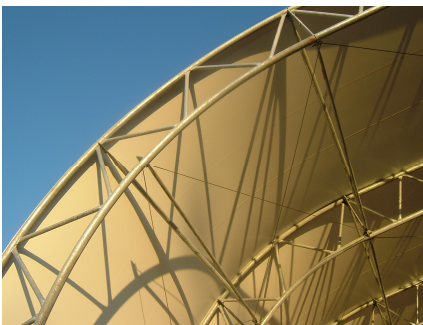

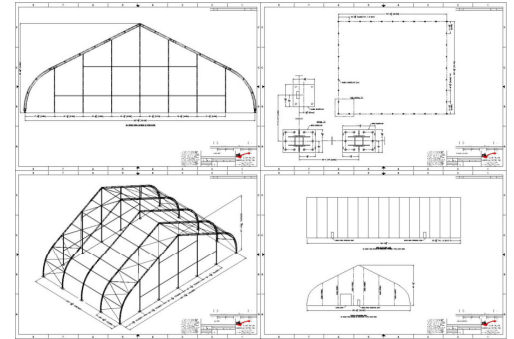

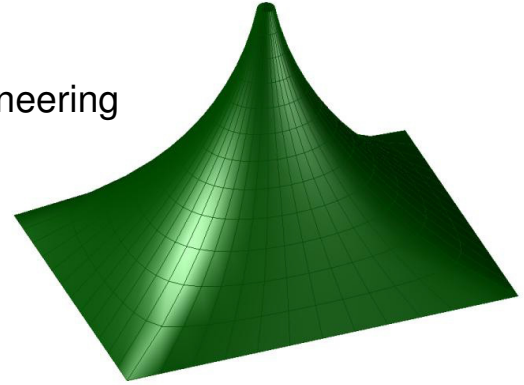

- engineered drawings for existing tents
- structural engineering calculation packages for clearspan structures
- anchoring requirements including ballast studies
- design modifications on existing tents

For fabric structure manufacturers and contractors:

- structural engineering calculation packages for clearspan structures
- design modifications of existing standard structures
- design of new standard fabric structures
- shop drawings for metal parts and fabric
- structural documents for building permits
- sales drawings and renderings

For owners of existing fabric structures:

- structural review of an existing fabric structure not serviced by the OEM
- design of fabric replacement (reskin) solutions
